

# MODULAR

ALUMINUM TRENCH BOXES

## DURABILITY + LIGHTWEIGHT

Trench boxes are designed to protect workers from the pressure and weight of soil in the event of a cave-in. Trench boxes are designed and built to withstand substantial pressure from the earth that surrounds them.

The MOD Series is a modular aluminum trench shield system that is light-weight and easily to transport. It can be used as a 2/3/4 sided system with existing components and can be changed quickly at a job site to meet your job site requirements.
