

ALUMINUM

TRENCH BOXES

RENT-ALL

888-722-3928

DURABILITY + DEPENDABILITY

Trench boxes are designed to protect workers from the pressure and weight of soil in the event of a cave-in. Trench boxes are designed and built to withstand substantial pressure from the earth that surrounds them.

The aluminum trench box is a lightweight trench shield (trench box) that only requires a small rubber tire backhoe or mini-excavator.
